

TEN REASONS FOR BIO-DIESEL

- 1) BIO-DIESEL is ecologically friendly fuel**
- 2) BIO-DIESEL is produced from renewable resources.**
- 3) BIO-DIESEL contains only 0.001% sulphur.**
- 4) BIO-DIESEL has 50% less soot emission upon burning, giving a longer engine life, and cleaner environment.**
- 5) When BIO-DIESEL is burnt through any engine, the engine emits the exact amount of carbon dioxide that was absorbed when the original material was growing.**
- 6) BIO-DIESEL contains no aromatics such as benzol or other carcinogenic polyaromatic components.**
- 7) BIO-DIESEL is easy to decompose biologically and in the case of accidental spills there is no harm done to either the soil or ground water.**
- 8) BIO-DIESEL is not considered as a hazardous substance. (Flashpoint above 110 degrees Celsius)**
- 9) BIO-DIESEL has a superior lubrication capability and increases engine life.**
- 10) BIO-DIESEL is an ecologically beneficial alternative in comparison with conventional diesel fuel.**
